

HOW TO USE OUR 1-20 PROVOCATION MATS

Directions

- To be printed on A4 size paper ,
- laminate and then
- simply cut around each white border to form your round edge mats

Get young children to either write each number 1-20 on our **can you write this number MAT** - using a marker (easy to wipe clean after each use when you laminate)

or get them to trace each number on our **can you trace this number 1-20 MAT**.
(these mats are design for kids to trace using either LOOSE PARTS, playdough or any other manipulative you have.

This pack also contains a **how many different ways can you make the number card MAT**
(set this up at your maths manipulative table with a number you would like them to learn from your existing number cards you have on hand OR one of our packs like our Reggio numbers 1-20. See how many ways they can make the number eg. number 6 - count tokens out to make the number 6, create the number 6 in writing using string, see what they can come up with, include baskets of fun loose parts and other manipulatives that they can use.

This pack also contains a **can you record the number using tally marks mat** - again either use your existing number cards you have on hand or use our reggio 1-20 cards to pick a number you would like for them to use tallys to total. TIP: try using sticks or pasta as a fun way for the child to make tally's with.

Lastly this pack contains a **how many different ways can you sort out the numbers mat**. Use your existing number cards, tokens or other number blocks you have on hand or our reggio inspired 1-20 number cards and see how many different ways children can sort them into groups eg; odd, even , high low, double digits ,see how many different ways they can think to sort them out.
